

# SELF ENROLLMENT

## SEAMLESS ONBOARDING OF NEW EMPLOYEES FOR IDENTITY & ACCESS SOLUTIONS

One of the challenges with any access control or identity management system is the process of getting a large number of users enrolled in the system. Typically, this responsibility falls on corporate security or HR staff to register and verify employees and guests who need to access and then to issue badges or other access credentials. In large companies, this workload can carry a significant human capital cost.

Our innovative self-enrollment solutions are designed to automate this process with technology, significantly reducing the amount of time and cost associated with managing these types of systems.

Self-enrollment is done securely by requiring a proximity card or by having users enroll their face remotely. When a proximity card is involved, credentials are added to the system manually or via a secure physical access control system (PACS) synchronization. Users are only enrolled after scanning a valid card, which immediately begins the enrollment. Guides on the screen help to direct the user in capturing good quality enrollment images.

When users enroll their face remotely, this can be done with any web browser and camera, including users' phones. Later, when a user identifies using an Access200 device, it will recognize their face and simultaneously capture irises. The captured irises are then enrolled to the system under the appropriate profile.

# SELF ENROLLMENT

## SELF ENROLLMENT CAPABILITIES INCLUDE:

- Rapid, seamless, biometric onboarding for small, medium, and large deployments
- Simultaneous iris and face capture providing multi-modal enrollment
- Secure, operator-less enrollment at any configured Access200 device at any time
- Enrolling pre-registered and pre-approved users with proximity card or pre-enrolled face biometrics
- Secure, out of the box synchronizations with OnGuard, C•CURE, Pro-Watch and other physical access control system (PACS)
- Encounters log recording successful and unsuccessful usage of each edge device

## SELF ENROLLMENT PROCESS

Our system syncs employee information with the company employee list (or the operator can manually create the employee in the system).

The employee receives an automated email with instructions on how to log into our webpage to capture a photo of their face and photo ID.

The operator receives a notification to review and authorize the employee's submission.

Once approved the employee receives another notification prompting them to complete their self-enrollment with an Access200 device.

The employee is automatically authenticated and authorized to access the building or other secure systems. using our biometric readers.

Princeton Identity is the identity management company powered by biometrics, making security more convenient, accurate, and reliable than ever before. Using iris recognition and other technology, Princeton Identity enables businesses, global organizations, and borders to simplify identity management, resulting in improved safety and protection. Formerly a division within SRI International, Princeton Identity spun out as an independent venture in August 2016.
